The Technical DataPack has the additional functionality, and user features to allow for data collection on work orders, operation, the machine, or equipment being used for an operation, along with operator information.

The JobPack Technical DataPack utilizes a big button format for ease of use for shop floor and machine operators. With one easy to use comprehensive interface, shop floor staff can input instantly, in real time, ALL activities, events, and job details to keep management informed.

Real time Active Work Lists on demand, on the go!

Non-Machine related events

JobPack® Operator Input. Manual Data Collection

Provides the ability to collect data, events, and job / work order information from shop floor operators. Set up is easy and fast allowing menu configuration for operator input. This provides a comprehensive ability to react to new and changing situations as they occur. Any non-machine related stoppage reason, or event can be defined and setup for operator input easily and fast.

Flexibility is key
with accurate shop floor operator input
For operation start, stop and quantity.

Additional information such as:

Setup Documentation, Operator Instructions

Data can be input by operators using:
Large button format touch screen
